ADAPTIVE CABINET SYSTEM

The new generation of drawer cabinets

Bräunlingen/Stuttgart, February 2019. – The new HiPerCab® (High Performance Cabinet) drawer cabinets that workplace equipment manufacturer Bedrunka + Hirth will be presenting as trade fair novelty at the LogiMAT in Stuttgart (19th to 21st February) are just as user-friendly as they are resistant to unauthorised persons. The intuitive touchscreen guides the user straight to the correct drawer, where the desired item is safely stored and displayed. Access is, however, denied to those who fail to prove their credentials.

“The software is the heart of our new cabinet system,” explains Daniel Vogt, Head of Design and Development at Bedrunka + Hirth. Whether a multilingual user interface, which enables language selection in German, English and French, or user identification via pin code and RFID chip: the Black Forest company equips its high-quality cabinet systems with information technology components that offer real added value. The user database records to whom and when access was granted, and access options can also be limited in time. The administrator of the user company can centrally manage user rights as well as connect and remove additional cabinets.

The touchscreen is located at the upper edge of the cabinet. The electromechanically locking drawers are made available in three steps. First, the system opens the drawers to which the user should be assigned access a crack. The desired drawer can be opened further with a tap. The other drawers remain in provision mode.

In a third step, the desired drawer can be fully pulled out (full pull-out). All others remain locked “for security reasons,” as Vogt explains. After all, the load capacity of the individual drawers is up to 100 kg. Following retrieval, the system makes sure that the pushed back drawer is slowed down, gently pulled in, closed and returned to provision mode.

The HiPerCab® is available with different equipment in the versions Medium and Premium and as an extension module, initially in widths of 705 and 1005 mm and heights of 1019 and 1219 mm. Bedrunka + Hirth offers the cabinet system with the same subdivision options as the classic drawer cabinet. The same applies to other features of the cabinet systems “Made in Germany”, such as the very stable housing with reinforced frame, the welded steel sheet construction or the selectable front heights. As usual, the front of the cabinets can be customised in different colours, for example, to match the user's corporate design.

TECHNICAL DETAILS

- Intuitive touchscreen
- Multilingual user interface via language selection in German, English and French. The language selection can be extended according to customer requirements
- User identification via pin code and RFID chip
- Dual use of RFID frequencies at 13.56 MHz and 125 kHz
- Customised RFID standard can be extended through update
- Customer-specific RFID readers can be implemented in the system
- Simple coupling through RJ45 standard cable
- Mains current required
- Global user database for all cabinet systems existing in the company
- Detailed event recording and evaluation option
- Same divider material as for the classic drawer cabinet
- Patent on the entire application of the HiPerCab®
Patent no. EP000003311698B1
- 2-year guarantee
- Emergency opening possible through the rear panel

TESTED TO THE FOLLOWING STANDARDS AND DIRECTIVES

- Standard DIN 5054 | Industrial steel storage drawer cabinets - Design, functional and safety requirements, testing and evaluation
- Low Voltage Directive 2014/35/EU
- EMC directive 2014/30/EU
- Radio-electric equipment directive 2014/53/EU
- RoHS directive 2011/65/EU

Software

VARIANTS:

HiPerCab® Medium

Created users receive authorisation for all drawers of the HiPerCab®.

HiPerCab® Premium

User-specific assignment of authorisation for one or multiple drawers of the HiPerCab® possible.

Extension module

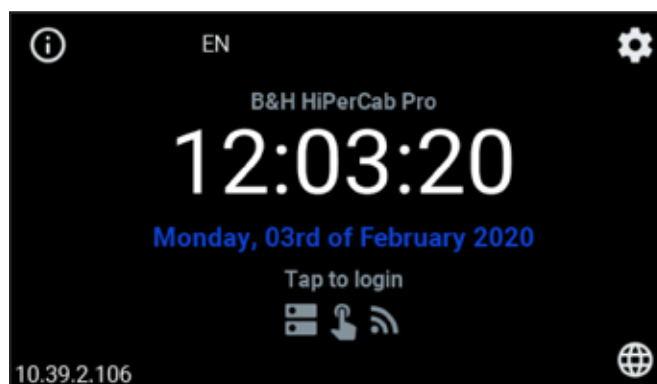

Can be connected to the HiPerCab® Premium. User-specific assignment of authorisation for one or multiple drawers of the HiPerCab® possible.

Upgrade

The subsequent upgrade from Medium to Premium is possible with the purchase of an unlock code at a price of EUR 250.00.

INITIAL COMMISSIONING

The drawer cabinet must first be connected to an earthed socket. The HiPerCab® software launches independently and is instantly ready for operation. The interface impresses with its consistent design and self-explanatory software. For initial commissioning, the administrator receives a pin code that can be changed later. The administrator is authorised to create new users and assign rights.

Screensaver

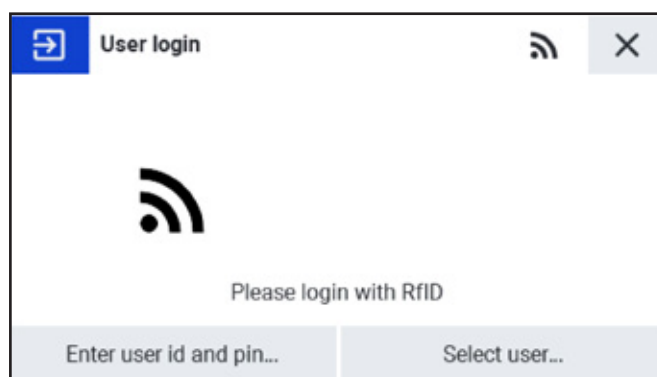

USER LOGIN

The cabinet or drawer is accessed directly via RFID transponder identification

OR

via touch of the display and subsequent selection between ID entry or user selection.

Both options then require the pin code.

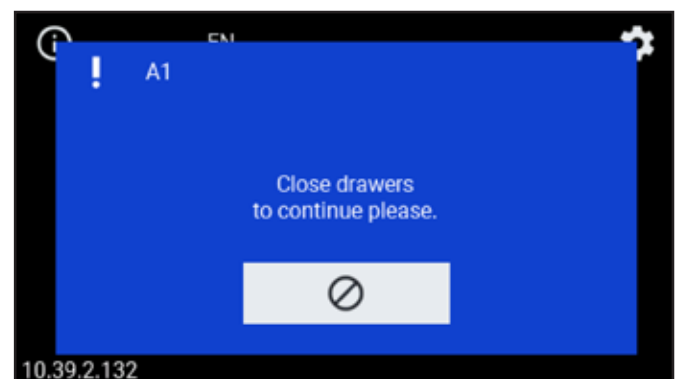

Software

DRAWER AUTHORISATION

Drawer authorisation granted = drawer is made available
Drawer authorisation denied = drawer is not made available or retracts again.

Security against tipping over through electromechanical lock system.
Only one drawer can be opened at a time.

USER ADMINISTRATION

Maintenance of the user is possible directly at the HiPerCab® cabinet (via the "sprocket" icon) or via the web interface. Network connection is required for maintenance via the web interface. Following identification via pin code or RFID, administration of the users is now possible for the administrator.

Software

ADMINISTRATION

The administration is divided into different categories to ensure the best possible overview. The administrator can change the administration settings directly at the cabinet or on the computer via the web browser. For administration via the web browser, the cabinet's network IP is entered into the search bar of the Internet browser. Then the software login window appears and requests admin access data just as the cabinet does. Following the login, you can carry out the administration in the same way as at the cabinet. Only for teaching the RFID transponders it is indispensable to proceed via the HiPerCab®.

1. USERS

The administrator can create users and assign authorisations. Whether a use should become an administrator can also be set here. Authorisations include access rights for the individual drawers, the group assignment of the user as well as temporary use. For example, "User 1" could be given daily authorisation for all drawers, however, only from 8:00 to 9:00 am, since a stocktaking or other tasks are due at this time. Each user is assigned an ID. With this ID, the user can log in faster when logging in via pin code.

2. GROUPS

It can be very time-consuming to maintain each user in detail, especially with many employees. The "Groups" option is available for this purpose. With the HiPerCab® Premium, individual groups with different authorisations can be created. All employees who shall be given the same rights are thus assigned to the same group. An example for this could be users such as temporary workers or working in multiple shifts. They are given different user rights, depending on their assigned group. "Group 1" can therefore be assigned the authorisation for the drawers from 7:00 am to 4:00 pm only and "Group 2" exclusively from 4:30 to 10:00 pm. Moreover, group-specific drawer assignments are also possible with the Premium version. If, for example, a user has been granted access to drawer 1 and 4 and is also a member of Group 3, which has access to drawer 1, 2 and 9, then this user has access to drawers 1, 2, 4 and 9.

3. CABINETS

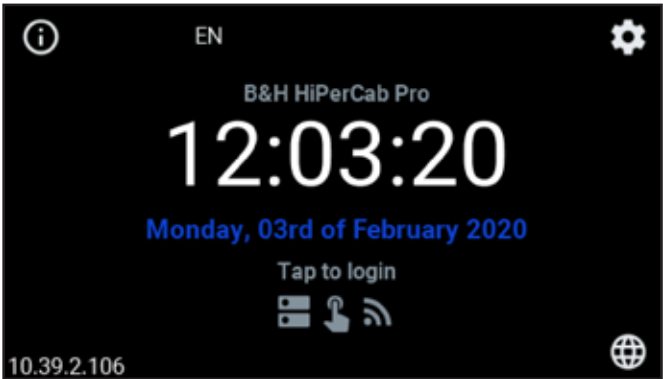

Further extension modules can be connected to the HiPerCab® Premium alongside Main Cabinet A. Base and extension modules as well as single drawers can be individually named and managed under "Cabinets".

4. SETTINGS

Basic settings, such as time and date but also software updates, can be set and managed. The software is currently available in German, English and French.

5. EVENTS

The administrator has the possibility to view a log of the accesses to the HiPerCab® and the drawers. The speed at which the drawers were closed can also be read here. All events can be exported to an Excel file via the web interface.

EMERGENCY OPENING THROUGH THE REAR PANEL

In order to get to the content of the HiPerCab® in the event of a power outage or other faults, emergency opening through the rear panel is possible.

STEP 1:

Disconnect earthed plug from the mains to put the HiPerCab® out of operation.

STEP 2:

Bring the cabinet into an optimum position so that the rear panel can be accessed.

STEP 3:

Remove 2 screws on the rear panel.

STEP 4:

Open the lock on the rear panel with the supplied key.
The rear panel can now be folded forwards and removed.

STEP 5:

On the drawer to be opened, push the surface marked red to the front right with your hand. See figure on the right.

STEP 6:

The drawer is now open a crack and can be pulled out from the front.

Intuitive touch control

The user is guided straight to the correct drawer via the intuitive touchscreen or RFID chip authentication.

Opening and closing the drawers in three stages of provision: **Identification, automatic provision, drawer selection**

- Each drawer is electromechanically locked and is made available by software.

1

IDENTIFICATION AND PROVISION

The HiPerCab® is "activated" by means of an RFID chip or a pin code. Approx. 20 mm of the authorised drawers are made available autonomously.

2

SELECTION AND UNLOCKING

The desired drawer opens automatically by approx. 50 mm when tapped. The other drawers remain in Provision Mode 1 and cannot be opened for security reasons.

3

OPENING THE DRAWER MANUALLY

The drawer can now be pulled open by hand as usual. The drawer is equipped with full pull-out. The load capacity of the drawer from a front height of 100 mm is 100 kg.

4

CLOSING THE DRAWER

The drawer is slid back to close. The last centimetres are closed by electromechanical self-retraction. Shortly afterwards, all authorised drawers are back in **Provision Mode 1**. Now either the next drawer can be selected or the procedure can be completed by logging off. In this procedure all drawers close autonomously. The drawers close automatically if no command is issued within a previously defined period of time.

Opening and closing the drawers by **selecting the drawer**.

- Each drawer is electromechanically locked and is made available by software.

1

PROVISION

The desired drawer is automatically made available by approx. 20 mm when tapped.

2

IDENTIFICATION

Use authentication for a drawer is queried and confirmed via RFID chip or pin code.

3

UNLOCKING

If the user is authorised, the drawer opens automatically by approx. 50 mm. The drawer can now be pulled open by hand as usual. If the user is not authorised, the drawer closes completely.

4

CLOSING THE DRAWER

The drawer is slid back to close. The last centimetres are closed by electromechanical self-retraction. Shortly afterwards, all authorised drawers are back in **provision mode**. Now either the next drawer can be selected or the procedure can be completed by logging off. In this procedure all drawers close autonomously. The drawers close automatically if no command is issued within a previously defined period of time.

Linkage variants

- Linkage variants are controlled via a Premium basic module.
- Several extension modules can be controlled.
- The HiPerCab® cabinets are connected via a RJ45 Ethernet cable.
- The extension module is additionally listed in the administration software, no further updates are required for this.
- Administration settings of the extension modules are made via the basic HiPerCab® module or the web interface.
- The linkage variants can be chosen as required.
Different cabinet widths and heights as well as front heights can be arranged individually.
